DeadDrops

What is a Dead Drop?

Dead Drops is an anonymous, offline, peer to peer file-sharing network in public space. USB flash drives are embedded into walls, buildings and curbs accessible to anybody in public space. Everyone is invited to drop or find files on a dead drop. Plug your laptop to a wall, house or pole to share your favorite files and data. Each dead drop is installed empty except a readme.txt file explaining the project. 'Dead Drops' is open to participation.

ChaosDrops

ChaosDrops are DeadDrops which haven't been posted to the official database. These are regional offline storages, which are administered by C3L memHowevbers. The system is however open for everyone.

DeadDrops in Luxembourg

Check this link: Dead Drops around Luxembourg

https://wiki.c3l.lu/doku.php?id=events:2015:code-and-hack-night-00

Drop one yourself!

1. Read the Dead Drops manifesto
2. Get yourself an USB stick of any size
3. Find a nice spot for your DeadDrop
4. Stick/push/chain, basically embed your USB drive into a crack or hole.

5. Put at least the readme (Official Version) or C3L README on your USB stick
6. Take 3 photos of your dead drop (overview, approximate location, closeup)
7. Submit your Dead Drop!
