

Digital Eyes: your personal bodyguard

Digital Eyes is the governing project about surveillance at all levels in Luxembourg. Currently it has three activities running:

- Luxembourg - Under Surveillance
- How to disappear in front of CCTV without magic?
- Cypherpunk Party's

We're assembling all information here on these sites, please feel free to /join or add / modify content.

Note: At the moment we're still on the quest for a [logo](#) to represent Digital Eyes. If you feel up to help resolving this challenge, do so.

Luxembourg - Under Surveillance

<http://lyon.sous-surveillance.net/> is an interactive map with loads of information about nearly every single camera in Lyon (France), with extended information as: position, photo, angle, location, owner, etc. The project has been called into life by the [Lyon Hackerspace](#) and is about being deployed as a global solution with the purpose to track every surveillance camera in the world.

We have the privilege to be the first international country that joined this specific movement.

Get involved?

- Active

Add cameras yourself to the map. A manual how to do that can be found here.

- Passive

Supply us the information we need and we add the cameras to the maps.

Chat & Follow

- [Mailing List](#) (Main)
- IRC: irc.indymedia.org #sous-surveillance
- [Redmine](#) (Project documentation)

Once upon a time, there was a map of nearly all CCTV systems in Luxembourg City; available on <http://mallory.lu/> As this project has some kind of died or is just simply not available anymore to the public, we decided to revive it, but in a larger context.

Every user / citizen should be able to help track down the cameras and easily submit the related

information to the map.
