

How to build a Pirate Radio?

Introduction

Please note, some frequencies are reserved for specific services **only**. Do not overmodulate these services with the help of the Pirate Radio. Consider [4].

Parts / Tools List

Parts

| Item | Quantity |
|---|----------|
| Raspberry Pi (Model A or B) | 1 |
| Micro USB cable or adapter (5V 1200 mA) | 1 |
| (Micro) SD Card (8GB recommended) | 1 |
| Female Jumper Wire Connector (2.54mm) | 1 |
| Heat Shrink Wire Cable | 1 |

Tools

| Item | Quantity |
|------------------------|----------|
| Soldering Iron Station | 1 |
| AWG 12 Cooper Wire | 1 |

Flash the SD card

Flashing the card with your favourite operating system is crucial for the radio to work, as you've probably imagined already. We recommend to install [Arch Linux](#) though. Why? Because, it's (1) light weighted, (2) well structured, (3) it has a very resourceful [wiki](#) and (4) is simply awesome.

Find the image file and installation instructions [here](#).

PiFM

Log on to your system and download the relating software you need to transmit your messages!

```
<sxh bash> [user@hostname ~]$ wget -no-check-certificate  
https://download.c3l.lu/dlbase/scripts/Pifm.tar.gz </sxh>
```

Increase the range

Tuning in!
