What is Tails?

> Tails is a live system that aims at preserving your privacy and anonymity. It helps you to use the Internet anonymously almost anywhere you go and on any computer but leave no trace using unless you ask it explicitly.It is a complete operating-system designed to be used from a DVD or a USB stick independently of the computer's original operating system. It is Free Software and based on Debian GNU/Linux.

Tails Website

- Tails official website

Our Support

We are an official tails mirror. Our server is part of the DNS round-robin of tails download section. So when you download tails it's likely that you download it from our server. We are also seeding it from our official torrent server.
