Todo / WIP

- Updating Command & Control

- official Ubuntu install is outdated + bloated
  - updating it breaks the desktop and ssh shutdown
- Synergy is half-broken
  - Install Barrier
- Try installing NixOS
  - if everything fails, install Debian or official distribution

* Fix a bricked CPE210 (Freifunk)

- stuck in boot (accepts TFTP)
- doesn't accept any recovery.bin
- boots on vmlinuz
  - crashes on both wiki vmlinuz and self built openwrt
