Robot X

Professional idiot that breaks stuff

[+] email: xbr at c3l
[+] XMPP: xbr at c3l

Projects

- Updated and documented Command & Control

- official Ubuntu install was outdated, bloated and broken (e.g. Syngergy software KVM)
    - updating it broke the desktop and ssh shutdown
- tried installing NixOS
    - not enough space
    - broken USB hotplug
- installed Armbian

Todo / WIP

* Fix a bricked CPE210 (Freifunk)

- stuck in boot (accepts TFTP)
- doesn't accept any recovery.bin
- boots on vmlinuz
    - crashes on both wiki vmlinuz and self built openwrt

Project ideas

- Hacked conference phone (Polycom) as a microphone/speaker combo for the Chill. It would most likely have a good microphone for "room" stuff. If the audio cancellation were to be lacking, Mumble's dev 1.4 RNNoise works well.
- Dancing and Singing Animatronics, see @agirisan (natalie)'s 3 robots. (She doesn't do a lot of animatronics, mostly other stuff, documentation and resources are sparse)
- Minitel terminal for the space: interface to different space services, but terminal-based
