Professional idiot that breaks stuff.

Yes, X is my name.

[+] email: xbr at c3l [+] XMPP: xbr at c3l

Projects

- Updated and documented Command & Control
 - official Ubuntu install was outdated, bloated and broken (e.g. Syngergy software KVM)
 - updating it broke the desktop and ssh shutdown
 - tried installing NixOS
 - not enough space
 - broken USB hotplug
 - installed Armbian
 - not great
 - Automated Archlinux install and setup using Ansible
 - Git repository

Todo / WIP

- * Fix a bricked CPE210 (Freifunk)
 - stuck in boot (accepts TFTP)
 - doesn't accept any recovery.bin
 - boots on vmlinuz
 - o crashes on both wiki vmlinuz and self built openwrt

Project ideas

- Hacked conference phone (Polycom) as a microphone/speaker combo for the Chill. It would most likely have a good microphone for "room" stuff. If the audio cancellation were to be lacking, Mumble's dev 1.4 RNNoise works well.
- Internal SIP network
- Dancing and Singing Animatronics, see @agirisan (natalie)'s 3 robots. (She doesn't do a lot of animatronics, mostly other stuff, documentation and resources are sparse)
- Minitel terminal for the space: interface to different space services, but terminal-based (example)
- New freifunk site
