for xbr 2021-04-10

## **Projects**

- Freifunk Luxembourg
  - took it over from fantawams
  - made a new website
  - trying to make everything fancy and nice
  - goal: making it more popular
- Updated and documented Command & Control
  - official Ubuntu install was outdated, bloated and broken (e.g. Syngergy software KVM)
    - updating it broke the desktop and ssh shutdown
  - tried installing NixOS
    - not enough space
    - broken USB hotplug
  - installed Armbian
    - not great
  - Automated Archlinux install and setup using Ansible
    - Git repository
- Maintain the Zigbee network inside of the hackerspace
  - SBC: RPi 4 Model B Rev 1.2
  - Gateway: Dresden-elektronik Phoscon RaspBee (1) (ITS CURSED)
  - took it over from virii
  - Network:
    - o 2 LED strips
    - 4 Multi sensors
- NOC member

## Todo / WIP

- \* Fix a bricked CPE210 (Freifunk)
  - stuck in boot (accepts TFTP)

- doesn't accept any recovery.bin
- boots on vmlinuz
  - o crashes on both wiki vmlinuz and self built openwrt

## **Project ideas**

- Hacked conference phone (Polycom) as a microphone/speaker combo for the Chill. It would most likely have a good microphone for "room" stuff. If the audio cancellation were to be lacking, Mumble's dev 1.4 RNNoise works well.
- Internal SIP network
- Dancing and Singing Animatronics, see @agirisan (natalie)'s 3 robots. (She doesn't do a lot of animatronics, mostly other stuff, documentation and resources are sparse)
- Minitel terminal for the space: interface to different space services, but terminal-based (example)
